

➤ **CASE STUDY – LOUVRE CLADDING**

Project	Westminster Theatre
Location	12 Palace Street, Victoria, London
Products	EWL75-CP 75mm blade site assembly clip-in louvre screen
Finish:	Polyester powder coated 40 microns to RAL7005 Mouse Grey
Job Type	Supply and installation
Programme	3 weeks manufacturing and 4 days installation
Main Contractor	Prima Consultants
Description	EDS were awarded the contract to supply and install site assembly louvre cladding and two new louvre doors to the Westminster theatre. The approach to the building needed visually improving and it was agreed that the EWL75-CP site assembly louvre system would be ideal as the blades could be cut to match the wall lines, whilst cleaning up any unsightly misalignments.

The Theatre emergency exit door was fully blanked off at the rear and included a panic bar for emergency use, whilst the adjacent Bin Store was fully ventilated and included a standard 5 lever mortice lock.

We were able to integrate the services for the existing car park lift, including remounting the traffic light on to the new corner post, creating a very aesthetic effect from the road with clean lines and a smooth finish.
